- **Registration number-** 25BCE10070
- **Branch-** B. TECH (CSE CORE)
- **Year-** 1st YEAR
- **Course code-** CSE0001
- **Date-** 31st MARCH 2026

INTRODUCTION

The Digital Literacy Project is designed to develop essential digital skills that are important in today's technology-driven world. It focuses on helping students understand how to effectively use digital tools, create a professional online presence, and communicate appropriately in academic and professional settings. The project includes various practical tasks such as creating an infographic, building a digital portfolio, exploring coding platforms, and learning email etiquette.

In addition, the project highlights the importance of cyber safety and responsible online behavior. Through these activities, it helps students gain hands-on experience, improve their technical knowledge, and become more confident in using digital platforms for learning and future career opportunities.

TASK 1- WRITE UP

Task 1: Digital Literacy Awareness Infographic

For this task, I created a digital literacy awareness infographic using Canva. The aim of my design was to help students understand the importance of digital literacy in today's world. My infographic covers key topics such as what digital literacy means, safe internet practices, and email etiquette.

I explained digital literacy as the ability to use digital tools responsibly and effectively. I also included tips on staying safe online, such as protecting personal information, using strong passwords, and avoiding suspicious links. Additionally, I highlighted proper email etiquette, like using a clear subject line, polite language, and professional tone.

While designing the infographic, I focused on making it visually appealing and easy to understand by using icons, colors, and short points instead of long paragraphs. One challenge I faced was selecting the right amount of information without overcrowding the design. However, this process helped me learn how to present information clearly and creatively.

Overall, this task improved my understanding of digital literacy and enhanced my design skills.

TASK 2- WRITE UP

Task 2: Build Your Student Digital Portfolio

For this task, I created and updated my digital portfolio on multiple platforms including GitHub and LinkedIn. The purpose of this task was to build a professional online presence that can be useful for future academic and career opportunities.

On GitHub, I created a profile README that includes my name, branch, year, and a short introduction about my interests and learning goals. This platform is useful for showcasing projects, code, and technical skills. On LinkedIn, I updated my profile by adding my education details, institution, and expected graduation year. LinkedIn helps in building professional connections and exploring internship or job opportunities.

Through this task, I understood how different platforms serve different purposes—GitHub for technical work and LinkedIn for networking and professional identity. In the coming years, I plan to regularly update my profiles by adding new projects, achievements, and skills.

Overall, this task helped me take an important step towards building my digital identity and preparing for my future career.

TASK 3- WRITE UP

Task 3: Explore Coding & Collaboration Platforms

For this task, I explored both a coding practice platform and a collaboration tool. I created an account on HackerRank and completed a beginner-level problem to understand the basics of coding and problem-solving. This helped me improve my logical thinking and become familiar with coding challenges and their structure.

In addition, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions. The quiz included multiple-choice questions and one short answer question to test students' understanding of digital literacy, safe internet practices, and online behavior. I also viewed responses through Google Sheets, which helped me understand how data can be collected and analyzed efficiently.

Through this task, I learned how coding platforms help in building technical skills, while collaboration tools like Google Forms and Sheets are useful for communication, data collection, and teamwork.

In the future, I plan to continue practicing coding regularly and use these tools for academic projects, surveys, and collaborative work. Overall, this task enhanced both my technical and collaborative skills.

TASK 4- WRITE UP

Task 4: Draft a Professional Email & Etiquette Guide

For this task, I learned how to write professional emails and understood the importance of proper email etiquette. I drafted two emails—one requesting an assignment deadline extension from a professor, and another expressing interest in a summer internship. While writing these emails, I focused on including a clear subject line, polite greeting, structured content, and a professional sign-off.

I also created a checklist of social media Do's and Don'ts to promote responsible online behavior among students. This helped me understand how communication differs across platforms and why maintaining professionalism online is important.

One situation where poor digital communication can cause problems is sending unclear or rude emails, which may lead to misunderstandings or a negative impression. This can be avoided by using polite language, clear messages, and proper formatting.

Overall, this task improved my communication skills and made me more aware of professional online behavior.

TASK 5- WRITE UP

Task 5: Cyber Crime Awareness

While researching cybercrime, I was surprised to learn how easily people can become victims of online payment fraud. Many scams appear very genuine, making it difficult to identify them. I realized that even a small mistake, such as clicking on an unknown link or sharing an OTP, can result in serious financial loss. This made me more aware of the importance of online safety.

As a result, one habit I will personally change is being more cautious during online transactions. I will always verify payment requests and avoid sharing personal or financial information with unknown sources. This awareness will help me stay safe and also guide others in using digital platforms responsibly.

CONCLUSION

Through this Digital Literacy Project, I gained a better understanding of how to effectively use digital tools and platforms in both academic and professional settings. I learned how to create and present information through an infographic, build a professional online presence using platforms like GitHub and LinkedIn, and practice basic coding skills. I also improved my communication skills by learning how to write professional emails and follow proper online etiquette.

Additionally, the project increased my awareness of cyber safety and the risks associated with online activities, especially financial fraud. Overall, this project helped me become more confident, responsible, and aware while using digital technologies, which will be beneficial for my future studies and career.
